Dear Friends,

P&SC is making an effort to move our climate change initiative forward, asking Friends about initiatives they have taken or plan to take in their own households. Trying to increase "participation" in the project from the fifty-percent of households that we reached in Phase I, the new survey has been simplified, focusing on descriptive information rather than specific details.

1. Two copies of the new form are attached in PDF format – one is blank for you to complete; the other is a "sample" that may be helpful.
2. There are several different ways to complete the survey...
 - a. Download the form to your hard drive, open the file and save it with a new name, for example George Fox CF2. When you open up the renamed file, you can fill in your answers like an on-line document, clicking on the appropriate columns and adding text information. Re-save the document, print it or send it to my attention as an email attachment.
 - b. Download and print the format, complete the form by hand and bring a copy of the completed form to me at Meeting.
 - c. Ask me at Meeting for a blank survey form to complete. Take it home to complete and return or, if you prefer, I'll help you to complete the survey at the Meeting House.
3. While details aren't necessary, if you know the specifics, please include the information in the text box at the bottom of each section. This will help the Meeting to calculate any savings we have collectively achieved. If you completed the survey for Phase I, I have your specific household info. If not, we will use the averages we calculated for the Meeting based on household size.

We hope you will be able to complete the surveys; we hope to pass the results on to the Earthcare Committee at SEYM, which is in the process of recruiting a Field Secretary for Earthcare, who will appreciate the information.

If I can be of any help, please let me know.

Tom
